Tuckers' Quality Vegetable Seeds

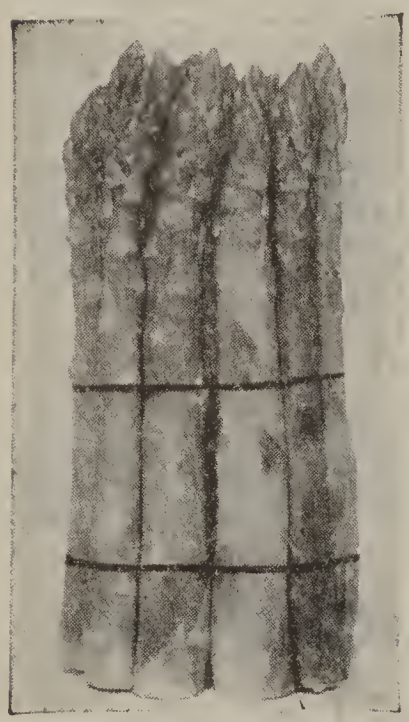
TUCKERS' QUALITY means the best that can be produced in Vegetable Seeds. It means trueness to variety and high germination, and these mean satisfaction to you in your garden. We test each variety before sending it out to our customers, and the Germination must be strictly up to standard or we do not send it out.

In our Vegetable Seed Department we list only such varieties as are of real merit, having excluded all sorts that are not of value, and have cut out a number of out-of-date varieties.

CULTURAL DIRECTIONS—Will be found at the heading of each class of vegetables, and also on most of our packets. These directions, while reliable, will not apply in every detail to the extreme sections of the United States, and therefore some allowance must be made for the difference of latitude.

ASPARAGUS

Can be grown in any good garden soil, but does best in sunny, moist soil. To grow plants from seed, sow in drills about one inch deep in rows, one foot apart. Keep the soil mellow and free from weeds; during the summer thin out and the following spring plants may be set in the permanent bed. Set the plants one foot apart each way, spreading the roots well apart. Cover with about three inches of soil.



New Washington

Columbian Mammoth White

The immense shoots are clear white, and in favorable weather remain so until three or four inches above the surface. The crown or bud of the young stalk is considerably smaller than the part below it. **Postpaid, pkt. 5c; oz. 10c; ¼ lb. 30c; lb. $1.00.**

New Washington

The rust-resistant variety. This variety originated with the Department of Agriculture, Washington, D. C., after years of careful hybridizing and selection. Only vigorous-growing plants, free from rust, were used. Should be used on account of its disease resistant quality. It should prove a boon to market gardeners. **Pkt. 10c; oz. 15c; ¼ lb. 50c; lb. $2.00.**

Asparagus Roots

Dig or plow a trench 15 to 18 inches deep, put in plenty of well rotted manure, covering it with a few inches of soil, then set the roots 1½ to 2 feet apart and cover with 4 inches of soil. In the fall, cut off and burn the top growth, and give a good application of stable manure. Early in the spring fork this in, and as the asparagus begins to grow, earth up to blanch the stalks as they grow.

FOR FIELD CULTURE—The rows may be from 4 to 6 feet apart and the roots set one foot apart in the rows. A subsoil plow should be used to break the soil as deeply as possible.

NEW WASHINGTON—A new giant variety, developed by the U. S. Department of Agriculture; extremely vigorous, high yielding and free from rust. **Postpaid, dozen 30c; 50 for $1.25; 100 for $2.00.**

COLUMBIAN MAMMOTH WHITE—Good, strong roots. **Postpaid, dozen, 30c; 50 for $1.00; 100 for $1.75.**

Brussels Sprouts

A species of the Cabbage family, which produces miniature heads from the sides of the stalk. These heads are a great delicacy, boiled in the same way as Cauliflower. The seed should be sown about the middle of May, in a seed bed, and the plants afterwards set in rows, 2 feet or more apart, and cultivated like Cabbage.

IMPROVED DWARF—Produces compact sprouts of the finest quality; a good keeper. **Postpaid, pkt. 10c; oz. 15c; ¼ lb. 50c; lb. $1.75.**

Borecole or Kale

Kale, or German Greens, do not form heads, but furnish an abundance of pretty curled leaves that are highly prized as food. Sow from the middle of April to the beginning of May; transplant and cultivate like Cabbage. Will endure considerable frost without injury.

DWARF GREEN CURLED—Is very dwarf and spreading. The leaves are beautifully curled and of a bright green color; quite hardy. **Postpaid, Pkt. 10c; oz. 15c; ¼ lb. 50c; lb. $1.75.**

Large ears having 18 to 20 rows of grains. Length from 9 to 11 inches. Very deep grains. Color yellow. Kernels dented and rows run very even on the cob. Matures in 120 days. It makes a rapid, strong and rank growth, attaining a height of 9 to 10 feet, often producing 2 to 3 large ears to a stalk. The foliage is large, healthy and makes unusually fine fodder and is one of the best varieties for that purpose. We consider Jumbo the variety to plant where an extra large eared corn is wanted. If you want the best big eared corn grown with large heavy deep grains, a yellow corn that is strictly right, plant Jumbo. **Postpaid, pkt. 10c; lb. 15c; 3 lbs. 35c; gal. 60c. Not prepaid, peck 75c; bu. $2.90. Larger quantities, $2.65.**

ALFALFA

HARDY ALFALFA

STANDARD VARIETY

Genuine Southwestern Grown Seed

In hardiness, the Southwestern grown nonirrigated Alfalfa ranks first. It is hardy enough to stand the winters except in high altitudes and where the winters are unusually severe. It is the alfalfa we recommend for general sowing. Sow 15 to 20 pounds per acre. **Quality Brand, postpaid, lb. 30c; 5 lbs. $1.25; 10 lbs. $2.30; 15 lbs. $3.25. Not prepaid, bu. $11.00; 100 lbs. $18.00.**

GRIMM ALFALFA

Genuine Certified Pure Stock

This variety of Alfalfa differs from others in the fact that it has a branching growth, instead of the single tap root. It makes a great network of feeder roots, which keep it from freezing out so readily. Its advantages are many, chief of which are its extreme hardiness and great yielding qualities. On account of its hardiness and great growth a field of Grimm Alfalfa will not kill out as easily. Ten to twelve pounds of seed are enough for an acre, as it branches considerably more than other varieties. **Quality Brand, postpaid, lb. 40c; 5 lbs. $1.80; 10 lbs. $3.50; 15 lbs. $5.00. Not prepaid, bu. $16.25; 100 lbs. $25.00.**

KOREAN LESPEDEZA

The Wonder Crop

INOCULATE ALL LEGUMES WITH NITRAGIN The Original Legume Inoculator

This is the large type of Japan or Lespedeza Clover. Suitable for hay and pasture. Korean Japan Clover starts in the spring, has large foliage, grows more rapidly and is ready to graze before the ordinary variety. The roots penetrate eight inches, making it highly drought resistant. Thrives on acid and worn out soils; no lime preparation required; does well where other clovers may fail. Furnishes excellent pasture crop from July well into September when most pasture crops are often at their poorest. Makes excellent quality hay, having produced as high as two tons air-dryed hay per acre. It is a legume, therefore a soil builder, adding both nitrogen and humus to soil, and is drought resistant. It is an annual, reseeding itself each year without soil preparation; seeding usually done in February, March and April. Rate of seeding: 12 to 14 lbs. per acre where full crop is desired first year; 8 to 10 lbs. if first crop is permitted to reseed itself for full crop the second year. It is not recommended for wet or shaded land. **Quality Brand, postpaid, lb. 20c; 5 lbs. 75c; 10 lbs. $1.40; 15 lbs. $1.95. Not prepaid, 50 lbs. $4.00; 100 lbs. $7.50.**

SERICEA LESPEDEZA

The Perennial Lespedeza

Grows abundantly on poor and acid soils. Makes a heavy root system, the roots reaching from one to three feet deep in the soil. Withstands severe droughts and the roots break up hardpan and heavy subsoils.

HABITS OF GROWTH. Lespedeza Sericea grows erect with a few to many stems rising from a crown like alfalfa. Each stem is branched and the plant grows from 3 to 5 feet tall during the first year. From 6 to 30 or more stems will arise from one crown during the second year, and the plant will grow taller. Additional stems grow each year until a plant five or six years old may have as many as 100 stems. The plant is extremely leafy, leaves holding on to the bottom of the stems. In a dense stand, the plant stems are no thicker than a wheat straw.

HAY PRODUCTION. After the first year, two cuttings of hay may be safely made, with three cuttings under favorable seasons. The quality of hay is excellent, provided cuttings are made when plants are 12 to 15 inches tall. Second cuttings are usually better than the first as from one to six new stems are put out by the plant after the initial cutting.

We suggest seeding in rows 36 inches apart using about two pounds of seed per acre. Cover very shallow, about ¼ inch deep, and firm the soil on the seed. **Postpaid, pkt. 5c; oz. 10c; ¼ lb. 25c; lb. 65c. Not prepaid, 5 lbs. $2.50. Larger quantities at 40c per lb.**

SWEET CLOVER

WHITE BOKHARA

On lands too poor to grow a paying crop of corn, on worn out, galled, waste land, on land too sandy to grow any other crop, or too acid or too moist for other clovers, sow sweet clover, and after a few years the land can be brought into condition for general crops. It is adapted to a wider variety of soils than any other clover; is useful for pasture, for forage, for bees, for turning under to improve, for it is a nitrogen gatherer, and for inoculating the land for alfalfa. The deep roots break up, create and drain stiff subsoil and add humus. Sow 15 lbs. to the acre in February, March or April. **QUALITY BRAND, Scarified Seed. Postpaid, lb. 20c; 5 lbs. 90c; 10 lbs. $1.70; 15 lbs. $2.25. Not prepaid, bu. $4.00; 100 lbs. $7.50.**

TUCKERS' PERFECT LAWN GRASS

INSURES A BEAUTIFUL EVERGREEN LAWN

A BEAUTIFUL LAWN is the desire of every home owner, whether in city, village or country. A good lawn adds more to the fine appearance of your home than any other one thing. A fine lawn always attracts notice. The making of a good lawn is not difficult, but certain things are necessary. The first and greatest essential is good seed, for with inferior seed all the expense of labor, fertilizer, and preparation are wasted. Plant Tuckers' Perfect Lawn Grass and you have eliminated the greatest source of failure. We have learned by many years of experience the best grasses and the proper proportions for producing a smooth, velvety lawn that will be permanent.

Our **Perfect Grass Seed** contains only the highest grade of grasses, suitable for the purpose of making a beautiful, durable, lasting lawn. Our Perfect Lawn Grass Seed germinates quickly and roots deeply. This enables it to withstand the intense heat of summer and the hard cold of winter, showing a beautiful, rich green from snow to snow. From early spring until late in the fall, lawns sown with our Perfect Lawn Seed remain green and fresh. For spring sowing, Lawn Grass should be sown as early as possible, although with seasonable weather conditions it can be sown as late as the end of March or early in April. The earlier the seed is sown, the better. For fall seeding sow late in August and through September. In seeding new lawns, use at the rate of one pound to each 25 feet square. For renewing old lawns, use about one-half the above quantity. **Postpaid, lb. 35c; 5 lbs. $1.65; 10 lbs. $3.20; 15 lbs. $4.50. Not prepaid, 25 lbs. $6.75; 50 lbs. $13.00; 100 lbs. $25.00.**

CANADA FIELD PEAS

A Fine Early Hay Crop

Canada Field Peas make a fattening and milk-producing food on land that will not produce a grain crop, and yet improve the soil by gathering and storing nitrogen. They yield heavy crops for either grazing or hay; stock eat it greedily and thrive on it. They grow 3 to 4 feet high, but can be grazed when 6 to 10 inches high. If not grazed too closely, a second growth may be had.

Sow in January, February or early in March, plow in 4 inches deep, after which drill in one bushel of oats to the acre to hold the vines off the ground. Sow one bushel to the acre. **Postpaid, 5 lbs. 50c; 10 lbs. 90c. Not prepaid, bu. $3.50. Larger quantities, $3.40 bu.**

SOJA BEANS

Any good corn soil will grow Soy Beans. The yield of beans is from 10 to 20 bushels per acre. For hay they should be sown thickly, broadcast or in drills, at the rate of one bushel per acre.

Laredo

When up a few inches they stool up like oats and each individual plant sends out from 6 to 15 very fine branches, which makes it one of the best for hay beans. It will mature very good in high altitudes and is upstanding and does not twine and fall. It has no equal as a bean producer. The seeds are small, black and flat. Can be sown from the latter part of April to the middle of July. **Not prepaid, bu. $2.75. Larger quantities $2.65 per bu.**

They are of "upright growth," do not commence to crawl until the plant reaches a height of 1½ to 2 feet; pods are long, growing at end of vine; pods do not open after ripening. More leaves remain on the stalk than on any other variety. On account of their small size, they will seed much farther than other varieties. Plant in drills or broadcast, the former the most economical. The seed is about one-half the size of the Whippoorwill variety and is speckled and colored like the former.

QUALITY BRAND. Not prepaid, bu. $3.00. Larger quantities $2.90 per bu.

TEOSINTE

A single seed producing from 30 to 60 stalks, each 10 to 12 feet high, gives some idea of what an enormous yield may be had from Teosinte. If cut when 4 or 5 feet high, it makes an excellent fodder, starts immediately into growth again, and will give several more cuttings as large as the first; we have known it to yield five cuttings a season. If sufficient is planted a continuous supply of nutritious green feed can be had daily right up to frost. The leaves are longer and broader than corn, contains 8 to 10 per cent of sugar, and are greedily eaten by all kinds of stock. It makes splendid ensilage, but is more particularly recommended as a continuous cutting green feeding crop. Plant in May or June in drills 3½ to 4 feet apart; 2 to 3 lbs. plants an acre. **Postpaid, oz. 10c; ¼ lb. 30c; lb. $1.00; 5 lbs. $4.50; 10 lbs. $8.00.**

Mung Beans

MUNG BEANS

A Wonderful Yielder of Beans and Hay

The Mung Bean is an erect, much branched plant, growing from 3 to 4 feet high. In general appearance it resembles the Soja Bean, but branches more, the branches spreading out wider. The pods average 2½ to 4 inches long and are borne out on the ends of the branches. The pods grow in clusters of from three to five, each pod containing from 10 to 14 seeds. The beans are small and are very rich in protein. The pods range in color from brown to black. The foliage is dark green and the leaves and foliage do not shatter as badly as do Soja Beans. The stem of the plant is much softer than the Soja Bean thus making a better forage. The yield of beans is from 8 to 15 bushels to the acre. Maturing season is about 90 days. Seed required per acre single rowed and cultivated is 12 to 15 pounds and they should be planted the average width of a corn planter. The hay is fully equal to Soja Beans and Cow Peas in feed value. **Postpaid, pkt. 10c; lb. 25c; 5 lbs. $1.00; 10 lbs. $1.75. Not prepaid, bu. $3.75.**

For spring sowing, sow as early as you can conveniently get it in, the earlier the better. If sown broadcast, 6 to 8 lbs. per acre should be used. **QUALITY BRAND. Postpaid. lb. 20c; 5 lbs. 75c; 10 lbs. $1.40. Not prepaid, 50 lbs. $3.50; 100 lbs. $6.75.**

Flax is one of the best paying grain crops, making good yields on any average soil. It is easy to handle and almost certain in its yield. The growing of a crop of Flax leaves the soil in the best of condition to follow with Wheat in the fall. Sow 25 to 30 pounds per acre; sow as early as possible and yet avoid the last killing spring frost. **QUALITY BRAND. Postpaid, pkt. 10c; lb. 20c; 5 lbs. 55c; 10 lbs. 90c; 15 lbs. $1.20. Not prepaid, bu. $3.00. Larger quantities $2.90 per bu.**

Hairy Vetch

A WONDERFUL FORAGE AND PASTURE PLANT

Also called Winter Vetch. This useful plant is noted for its extreme hardiness and is valuable for forage and fertilizing purposes. It is an annual, but drops its seeds freely and will come up year after year on the same ground. The Department of Agriculture estimates the value of an acre of Vetch plowed under equivalent to $16 worth of commercial fertilizer. A sowing made in August or September covers the ground before winter, prevents washing during winter and early spring. It can also be sown in April and will be ready to cut by the middle of July, the second growth affording excellent hog pasture during the summer. The yield of forage varies from 10 to 15 tons per acre, equal to 3 to 4 when cured as dry hay. Sow in drills, using 30 pounds per acre. **QUALITY BRAND. Postpaid, lb. 25c; 5 lbs. $1.00; 10 lbs. $1.90; 15 lbs. $2.65.** Write for prices larger quantities.

SUDAN GRASS

A Wonderful Quick-Growing Summer Hay and Pasture Grass

Refer to Price List in back of Catalogue for Prices in Larger Quantities

Sudan Grass requires a fine bed and seeding should be done after the soil has become warm, about corn-planting time or a little later. When sown in good soil, the result is usually a poor stand or slow growth for several weeks, so that in the end no advantage has accrued from the early seeding. In seeding broadcast or in rows with a wheat drill, about 20 pounds of seed are required for an acre. In planting for seed, it is drilled in rows wide enough apart to allow of cultivation, using 4 pounds per acre. Sudan Grass stools wonderfully as many as 100 stalks from one seed have been found and this combined with the fact that 2 to 3 crops can be cut from one seeding in a season places this wonderful grass ahead of all others. The hay should be cut as soon as the grass is fully headed and early cutting is specially advised where more cuttings per season are expected. The grass can be cut with a mower the same as other grasses. Sudan Grass stools out thickly after the first cutting and make a thicker growth for the second and third cutting than for the first. Our stock is absolutely pure and first class in every way. **QUALITY BRAND. Postpaid, pkt. 10c; lb. 20c; 5 lbs. 75c; 10 lbs. $1.25. Not prepaid. 100 lbs. $6.00. Larger quantities, $5.75 per 100 lbs.**

SORGHUMS

Nonwarranty

Because the yield is dependent upon so many things beyond our control, we do not guarantee Cane Seed to produce syrup.

Do not plant Sorghum or Cane Seed until the soil is thoroughly warm. In drills for Sorghum, 4 to 5 pounds of seed per acre are required. For hay, 1½ to 2 bushels either broadcast or drilled.

Texas Ribbon

JAPANESE HONEY DRIP

Open Head Type. One of the very best varieties for Sorghum purposes. The stalks grow to a very large size, both in height and diameter. Ribbon Cane has produced the greatest number of gallons of sorghum of any variety ever planted in this section. We strongly recommend Ribbon Cane. It also makes excellent forage, making big yields and is sweeter than any ordinary variety of fodder cane. **Postpaid, pkt. 10c; lb. 25c; 2 lbs. 45c; 5 lbs. $1.00; 10 lbs. $1.90; 15 lbs. $2.60. Not prepaid, bu. $3.75.**

Sugar Drip

This variety not only makes large yields of syrup, but syrup of decidedly superior quality to the ordinary variety of sorghum. It is not a difficult matter to make sorghum, and with a variety like Sugar Drip, we believe that the making of sorghum will become very general, not only for home use, but also for sale in our local markets. It is also exceedingly adapted for forage, making an excellent growth, and is more juicy and succulent than other kinds. **Postpaid, pkt. 10c; lb. 20c; 2 lbs. 35c; 5 lbs. 75c; 10 lbs. $1.40; 15 lbs. $1.80. Not prepaid, bu. $2.50.**

Early Black Amber

Early Orange

With taller and heavier stalks than Early Amber. Largely used for nay and fodder. **Not prepaid, write for prices.**

MILLETS

Seed after the soil is thoroughly warm, using 25 to 40 pounds of seed per acre. Millet does best on rich soils, full of humus, or vegetable matter, where the seed bed is fine and well prepared.

German Millet

German Millet makes a large yielding and most nutritious hay crop, quick growing and easily cured. It requires, however, to be seeded thickly and the crop should always be cut while in bloom, before the seed hardens in the head. It can be sown at any time from the middle of May until the end of July. Do not sow too early as it does not grow off well until the soil and weather get warm. It matures its crops in about 8 weeks after seeding. **Not prepaid, bu. $1.75; 100 lbs. $3.25.**

White Wonder Millet

The most striking feature of White Wonder Millet is the size of the heads. The heads of this variety will run from 8 to 12 inches and a single head will have as many as 15,000 seeds. The yield of White Wonder Millet is very heavy and some growers state that it will outyield other millets three to one. The foliage is very heavy and the leaves broad, resembling those of corn. It produces an immense amount of excellent fodder which cures very rapidly. **Not prepaid, bu. $1.75; 100 lbs. $3.25.**

SEED OATS

Columbia

Kanota

The two characteristics which make Kanota especially valuable are its earliness and its ability to yield large crops. Growers have uniformly reported Kanota to be from 7 to 10 days earlier than Red Texas. In sections where hot weather and midsummer droughts are common this early maturity is a tremendous advantage, especially when combined with heavier yields. **Not prepaid, bu. 75c;. Larger quantities 70c per bu.**

Texas Red Rust Proof

The Red Rust Proof Oat develops to the very highest perfection. The grains are true in shape and color, are extra large and plump; stool wonderfully, are Rust Proof, while the growth is very vigorous. This Oat is very hardy, standing cold weather and hard knocks extra well. The seed is reddish yellow in color, very large and plump, straw is very stiff and heavy with good wide leaves. **Not prepaid, per bu. 80c. Larger quantities, 75c bu.**

Columbia

Heavy Yielding and Early

A new variety of oat introduced by the Agricultural College of the state of Missouri. Columbia is an exceptionally heavy yielder, is early, produces an extra heavy yield of both grain and straw and is, we believe, the best of the recent introductions. We hope that you will give Columbia Oats a trial as we especially recommend them to be the best variety to date. **Not prepaid, bu. 80c. Larger quantities 75c per bu.**

ALTAS SORGO

A sweet variety of cane especially suitable for hay and silage. A great yielder and one of the best of the Sorgo family. **Postpaid, pkt. 10c; lb. 20c; 5 lbs. 75c; 10 lbs. $1.25. Not prepaid, bu. $3.00.**

Grohoma

The Wonder Grain and Fodder Crop

Grohoma is a drought resistant crop. It produces amazing crops of both grain and fodder. A great drought resister, very deep rooted, an exceptionally sweet stalk and wonderful feed value. Its growth averages 4½ to 5 feet high. Seeding should be at the rate of 5 to 6 pounds per acre with corn planter, in rows, thinning the stalks to about one foot apart in the row. We especially recommend Grohoma as being one of the best of the newer introductions of the grain sorghum families. **Postpaid, pkt. 10c; lb. 20c; 5 lbs. 75c; 10 lbs. $1.40. Not prepaid, bu. $2.25.**

Feterita

The grain of Feterita is similar to Milo, but is pure white and also larger and softer. It does not shatter badly and yields up to 50 bushels per acre. Feterita is planted in rows like Kaffir or Milo, using from 3 to 5 pounds per acre and the crop is cultivated and harvested just like Milo. Feterita grows about 5 feet high, on an average. The heads grow up straight like Kaffir and are a little larger around, but not quite so long. The grain is softer than Kaffir or Milo grain and is liked better by all kinds of stock. Feterita matures from 15 to 20 days earlier than Kaffir. **Postpaid, pkt. 10c; lb. 20c; 5 lbs. 60c; 10 lbs. $1.10. Not prepaid, bu. $2.25.**

Hegari

A cross between White Kaffir and Feterita. It is more desirable for forage than either and the bad qualities of each have been eliminated; when ripe Feterita shatters out, Hegari will not. It is dwarf in habit of growth, and the compact heads of large white grain make it very attractive. The stalks contain more saccharine matter than Feterita and Kaffir, which makes it better for stock feeding, and for filling silos. Plant 8 to 10 pounds per acre in drills. **Postpaid, pkt. 10c; lb. 20c; 5 lbs. 50c; 10 lbs. 85c. Not prepaid, bu. $1.75.**

Red Kaffir Corn

Grows taller than the white; stalks slender, juicy and very leafy. The seed is red, smaller than that of the white, and yields much heavier. **Postpaid, pkt 10c; lb. 20c; 5 lbs. 50c; 10 lbs. 85c. Not prepaid, bu. $2.00.**

Kaffir Corn

Genuine Dwarf White Blackhull

Is the result of careful selection extending over a number of years, and which has produced a type of uniform dwarf growth. The plants range from 3½ to 5 feet in height, depending somewhat on quality and condition of the soil and weather conditions. The heads are uniformly larger and of better shape than the older types of White Kaffir. **Postpaid, pkt. 10c; lb. 20c; 5 lbs. 50c; 10 lbs. 80c. Not prepaid, bu. $1.75.**

Milo Maize

Milo Maize makes a thick growth and excellent forage which is very nutritious. The yield in grain is about equal to Kaffir corn. Milo also makes excellent ensilage. **Postpaid, pkt. 10c; lb. 20c; 5 lbs. 55c; 10 lbs. $1.00. Not prepaid, bu. $1.75.**

KAFFIR CORN

BROOM CORN

Oklahoma Dwarf

Quite distinctive from all others in earliness. Of robust habit and extreme productiveness; brush long and well fibered and is a drought resister. Improved Evergreen

This Broom Corn grows about 7 to 9 feet high, stands up well, and is entirely free from crooked brush. The fiber is long and fine. Its greatest value is that it will not get red in the field before it is cut, but is strictly a green variety of brush. **Postpaid, pkt. 10c; lb. 25c; 2 lbs. 45c; 5 lbs. $1.00; 10 lbs. $1.85; 15 lbs. $2.50. Flower Seeds

To grow flowers well, the soil must be carefully prepared as for vegetables. Spade the beds to a good depth and make them rich with well rotted manure, thoroughly mixed in. A small quantity of sand will greatly improve stiff, heavy clay. **Don't bury your seeds.** Plant the largest, like Nasturtiums, not more than an inch deep; Balsams, half an inch; Asters, a quarter of an inch; Petunias, Poppies, etc., on the surface. Firm the soil over the seeds with a board and keep it constantly moist. Don't allow seedlings to crowd each other. Transplant in cloudy weather or in the evening and shade from the sun a day or two.
